## RICOH THETA SC2 User Guide

This user guide provides more detailed explanations on how to use RICOH THETA SC2.

- Content included and images used in this guide may differ from those of the actual device depending on the app or firmware version.
- Update the camera unit firmware to the latest version before using the camera. See below for how to update the firmware to the latest version.

### – Updating the Camera Firmware

See below for a history of firmware version updates.

<https://support.theta360.com/en/download/firmware/sc2/>

- See below for the details of apps available for RICOH THETA SC2.

<https://theta360.com/en/about/application/>

- Images of the basic app for smartphone used throughout this guide are from “RICOH THETA for iPhone” (the basic app for iOS). There may be some differences from “RICOH THETA for Android” (the basic app for Android).

\* There are some differences between functions provided by the iOS app and Android app.

## Checking the Package

When opening the package, check that the following items are included:

- **RICOH THETA SC2**

- **USB cable**

- **Soft case**

- **Quick Start Guide**

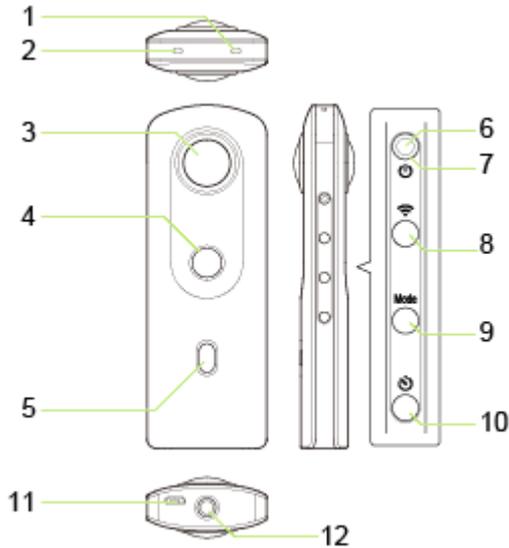

- **Important Message to Customers**

[← Back](#)[▲ Back to Top](#)

## Names of Camera Parts

This section explains the names and functions of the buttons, lamps, etc. on the camera.

1. Speaker

2. Microphone

3. Lens

### Caution

- Be careful when handling the lens section to avoid damage.

4. Shutter button

Press to capture images.

5. OLED panel

Displays the shooting mode, battery level, etc.

6. Power lamp

Indicates the power status. ([Details](#))

7. Power button

Turns the power on and off.

8. Wireless button

Turns on and off the wireless LAN function ([Details](#)) and Bluetooth<sup>®</sup> function ([Details](#)).

9. Mode button

Switches the shooting mode.

10. Self-timer button

Switches the shooting method between “Normal shooting” and “Self-timer shooting”.  
 Enables the connection to Bluetooth® accessories when the button is pressed and held.

**Note**

- For the accessories with which proper operation has been confirmed, see the RICOH website.

11. USB terminal (Micro-B)

Used to connect the camera to a computer via the provided USB cable. ([Details](#))

**Caution**

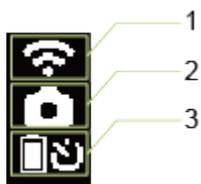

- It may take time for the battery to charge or the battery may not charge at all when a USB cable other than the provided USB cable is used.

12. Tripod mount hole

**Caution**

- When using the tripod, take care not to overtighten the screw.

## Information Displayed on the OLED Panel

1. Communication status

- : Wireless LAN function set to on
- : Bluetooth® function set to on

2. Shooting mode

- : Still image shooting mode
- : Video shooting mode
- : Preset shooting mode (You can change the preset shooting mode according to the shooting scene using the basic app for smartphone.)
- : During video recording
- : Camera unit high-temperature warning ([Details](#))
- : Memory capacity warning
- : Error

3. Battery level / Self-timer status / Bluetooth® accessory connection status

- to : Battery level (100% to 0%)
- : Battery error
- : Self-timer shooting
- : Bluetooth® accessory connected
-

: Processing

---

**Note**

- The countdown is displayed on the entire OLED panel during the self-timer shooting.

[Preparation](#)

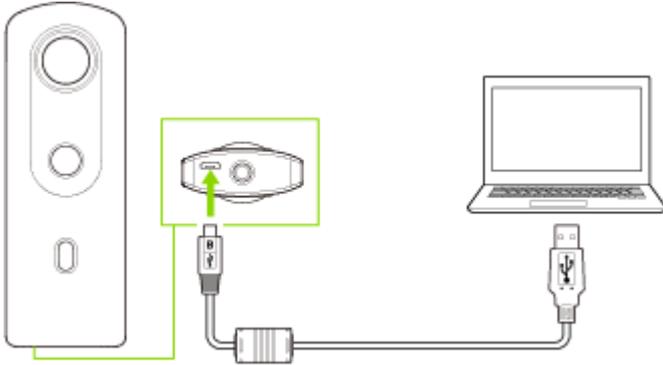

&gt;

[Charging](#)

## Charging

The built-in battery needs to be charged before use.

1. Connect the camera to the computer using the provided USB cable.

- The power lamp lights green when charging starts.
- The power lamp is unlit when charging is complete.

2. Remove the USB cable after charging is complete.

### Caution

- Use the provided USB cable for charging. It may take time for the battery to charge or the battery may not charge at all when a USB cable other than the provided USB cable is used.
- Connect the cable directly to a USB port on the computer. Do not connect the cable via a USB hub. It may not be possible to charge via some USB hubs.
- When charging, be sure to insert and remove the USB cable while the computer is turned on. If the computer is restarted while the USB cable is inserted, the computer may not recognize the camera.

## Charging Time

The camera is charged in approx. 270 minutes (at 25°C (77°F)).

### Note

- The time described above is a guide for full charging. The charging time differs according to the remaining battery level.
- If the remaining battery level is low, it may take time for the camera to be recognized by the computer.

[Top](#)

&gt;

[Preparation](#)

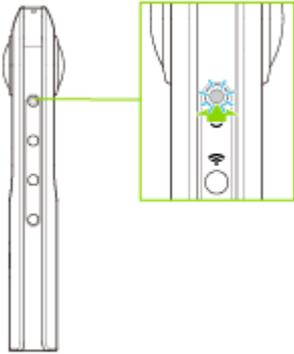

&gt;

[Turning the Power On/Off](#)

## Turning the Power On/Off

When charging of the built-in battery is complete, turn on the power.

1. Press the power button.

- The power lamp and OLED panel turn on.
- Press the power button again to turn off the power.

## Power Lamp

The lamp indicates the camera power status.

### Lit in white:

The power is on.

### Lit in green:

The battery is charging.

### Flashing in red:

The power is turning off.

### Unlit:

Charging is complete, the camera is in the sleep mode or light/sound off mode, or the power is off.

#### Note

- When the camera is connected to a computer with a USB cable, the lamp lights green and the battery is charged. The lamp is unlit when charging is complete.

Preparation

Downloading the App

## Downloading the App

This camera captures great images. You can also use a smartphone app for shooting, viewing, and sharing images from your smartphone.

The following apps for smartphone are available for this camera.

### Basic app:

RICOH THETA (iOS app and Android app)

### Editing app:

RICOH THETA+ (iOS app and Android app)

1. Access the app download service that is compatible with your smartphone.
2. Search for "RICOH THETA".
3. Follow the instructions on the screen to download the app.
  - An icon () is displayed on the home screen when the download is complete.

#### Note

- The apps for computer are also available. See below for details on each app and the latest information about apps.  
<https://theta360.com/en/about/application/>
  - [Installing the App for Computer](#)
- There are some differences between functions provided by the "RICOH THETA for iPhone" (iOS app) and "RICOH THETA for Android" (Android app). The screens of "RICOH THETA for iPhone" (iOS app) are used as examples in this user guide.

> Preparation

> Connecting to a Smartphone via Wireless LAN

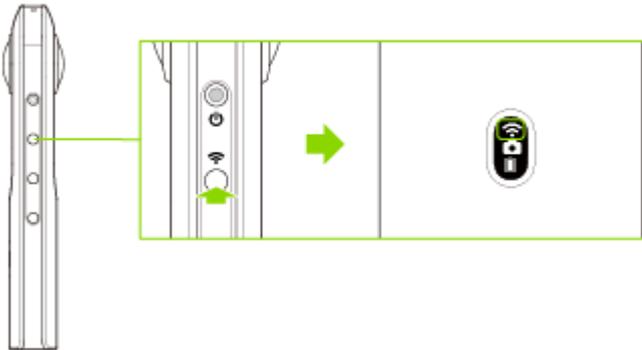

## Connecting to a Smartphone via Wireless LAN

When the camera is connected to a smartphone via a wireless LAN, you can use the smartphone to capture images remotely, view images, and make function settings.

1. Turn on the power of the camera.

2. Press the wireless button.

- The wireless LAN function is turned on, and  flashes on the OLED panel.

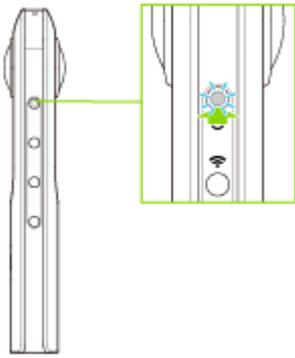

3. Turn on the Wi-Fi™ function of the smartphone.

4. Start the basic app for smartphone, and then tap .

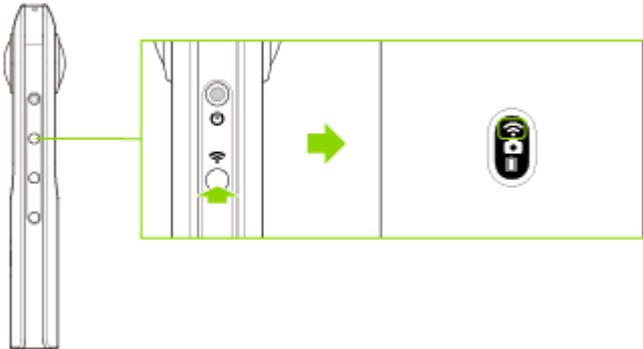

- Follow the instructions on the screen to connect the camera to the smartphone.
- When the wireless LAN connection is complete,  becomes lit.

## Connecting by Specifying the SSID

1. Turn on the power of the camera.

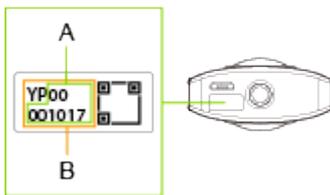

2. Press the wireless button.

- The wireless LAN function is turned on, and  flashes on the OLED panel.

3. Display the Wi-Fi™ settings of the smartphone.

4. Select the SSID of the camera from the network list and enter the password.

- The serial number printed at the bottom of the camera is the same as the SSID and password.  
The SSID is "THETA + Serial number indicated by (B) + .OSC" (in this case "THETAYP00001017.OSC"). The password is the numbers indicated by (A) (in this case "00001017").
- The password can be changed using the basic app for smartphone.  
– [Checking and Changing the Camera Settings](#)
- The password is initialized by pressing and holding the wireless button and mode button simultaneously while the power is on. The power turns off automatically at this time.
- When the wireless LAN connection is complete,  becomes lit.

## Date and Time Settings

The date and time of the camera are synchronized with the smartphone or computer when the camera is connected to the basic app.

Preparation

Connecting to a  
Smartphone via Bluetooth®

## Connecting to a Smartphone via Bluetooth®

When the camera is connected to a smartphone via the Bluetooth®, you can use the smartphone to capture images remotely and make function settings.

1. Turn on the power of the camera.

2. Turn on the Bluetooth® function of the smartphone.

3. Connect the camera to a smartphone via a wireless LAN.

- [Connecting to a Smartphone via Wireless LAN](#)

4. Start the basic app for smartphone, and then tap [Settings].

- The [Settings] screen is displayed.

5. Tap [Cam Bluetooth settings].

- The [Cam Bluetooth settings] screen is displayed.

6. Tap [Register].

## Date and Time Settings

The date and time of the camera are synchronized with the smartphone or computer when the camera is connected to the basic app.

← Back

Preparation >

Connecting to a Bluetooth® Accessory

## Connecting to a Bluetooth® Accessory

An accessory can be connected to the camera via Bluetooth®.

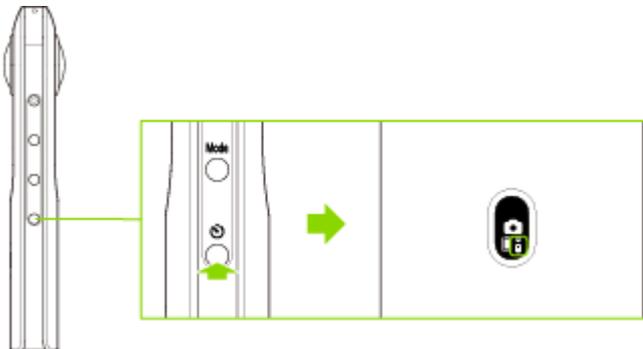

1. Turn on the power of the camera.

2. Set the Bluetooth® accessory to a pairing state or connection standby state.

- See the manual of the Bluetooth® accessory for details.

3. Press and hold the self-timer button.

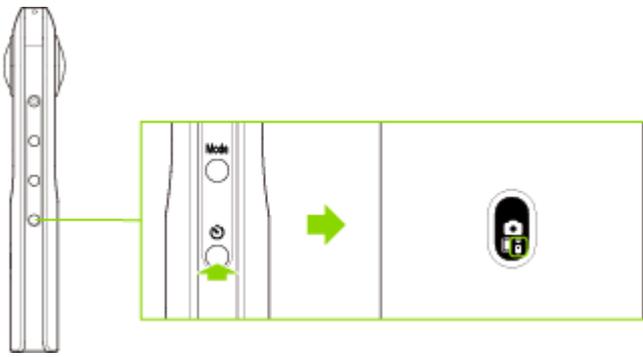

- The camera enters the pairing state, and  flashes on the OLED panel.

4. Connect the Bluetooth® accessory to the camera according to the manual of the accessory.

- When the Bluetooth® accessory connection is complete,  becomes lit.

## Disconnecting the Bluetooth® Accessory from the Camera

1. Press and hold the self-timer button.

-  turns off, and the Bluetooth<sup>®</sup> accessory is disconnected from the camera.

## Resetting the Bluetooth<sup>®</sup> Connection Information

When you want to connect another Bluetooth<sup>®</sup> accessory to the camera or when the accessory cannot be connected correctly, press and hold the wireless button and mode button simultaneously to reset the Bluetooth<sup>®</sup> connection information.

### Caution

- If you reset the Bluetooth<sup>®</sup> connection information, the wireless LAN password is also reset.

## Updating the Camera Firmware Using a Computer

The camera firmware can be updated using the basic app for computer.

The app is required to update the firmware. Download the app from the following site.

<https://support.theta360.com/en/download/>

1. Start the basic app for computer.
2. Select [File] → [Firmware Update] in the menu.
3. Follow the instructions on the screen to connect the camera to the computer using the provided USB cable.

4. Select [To next].
5. Check the current version and available version, and select [To next].
  - The firmware file transfer starts.
6. When "Transfer Done" is displayed, follow the instructions on the screen to update the firmware on the device.

### Caution

- Fully insert the USB cable when connecting it.
- Do not disconnect the camera from the computer during the firmware file transfer.

### Note

-  and  flash alternately on the OLED panel of the camera during the firmware update.

Updating the Camera Firmware

Updating the Camera Firmware Using a Smartphone

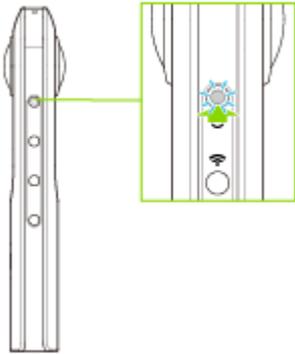

## Updating the Camera Firmware Using a Smartphone

The camera firmware can be updated using the basic app for smartphone.

The app is required to update the firmware. Download the app from the following site.

<https://support.theta360.com/en/download/>

1. Turn on the power of the camera.

2. Connect the camera to a smartphone via a wireless LAN.

- [Connecting to a Smartphone via Wireless LAN](#)

3. Start the basic app for smartphone.

4. Tap [Settings], and then tap [Update firmware].

- The firmware version of the camera is checked.

5. Tap [Check the latest version].

6. Follow the instructions on the screen to change the wireless LAN settings of the smartphone and connect it to the Internet.

- The latest available firmware version is checked.

7. Tap [Start download].

- The firmware file is downloaded to the smartphone.

8. Tap [Transfer files to camera].

9. Follow the instructions on the screen to change the wireless LAN settings of the smartphone and connect it to the camera.

10. Tap [OK].

- The firmware file is transferred from the smartphone to the camera. When the transfer is completed, the update process starts in the camera.
- When the update process is completed, the camera restarts.

**Caution**

- When the internal storage space of the smartphone is insufficient, the downloading of the firmware file may be canceled. In this case, free up the space before performing the firmware update.
- When the battery level of the camera is low, charge the battery before performing the firmware update.
- Do not disconnect the wireless LAN connection between the camera and the smartphone during the firmware file transfer.

**Note**

-  and  flash alternately on the OLED panel of the camera during the firmware update.

Shooting Still Images

Shooting Still Images While  
Connected to a  
Smartphone

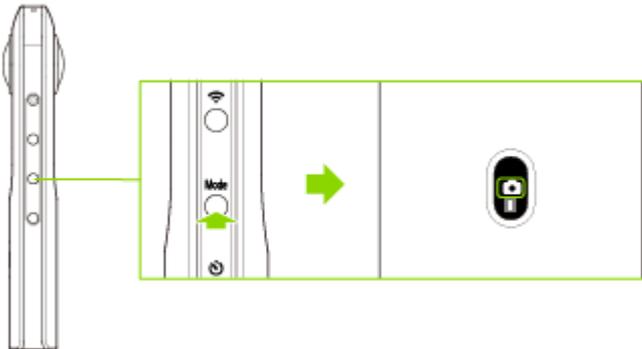

## Shooting Still Images While Connected to a Smartphone

You can capture still images using the basic app for smartphone.

1. Turn on the power of the camera.

2. Press the mode button to select the still image shooting mode.

-  appears on the OLED panel.

3. Connect the camera to a smartphone via a wireless LAN or Bluetooth<sup>®</sup>.

- [Connecting to a Smartphone via Wireless LAN](#)
- [Connecting to a Smartphone via Bluetooth<sup>®</sup>](#)

4. Start the basic app for smartphone.

5. Tap  to start shooting.

- Tapping EV at the bottom of the screen displays the slider for correcting the exposure. If you check a still image and feel that it is too bright or too dark, adjust the brightness and capture the image to obtain the desired brightness. Moving the slider to the right brightens the image. Moving the slider to the left darkens the image.
- In the still image capture mode, you can make settings such as the shutter speed, ISO sensitivity, white balance, shooting method, image size, live view, and post-view on/off to suit the purpose of your shooting.
  - [Checking and Changing the Shooting Conditions](#)

**Caution**

- If the shutter speed is set slower than 1/8 seconds when the exposure mode is set to the manual mode, a sound is heard both at the start and end of shooting. In addition, if shooting is performed when the exposure mode is set to the auto mode and [Option Setting] is set to the noise reduction or HDR rendering, a sound is heard both at the start and end of shooting. At this time, images are not saved if the power is turned off before shooting is complete.
- When performing shooting after setting the exposure mode to the auto mode and setting [Option Setting] to the noise reduction or HDR rendering, fix the camera in place using a tripod, etc. to prevent the camera from moving.

**Note**

- If an image is captured while the camera is connected to a smartphone with the GPS function enabled, position information is recorded for the image.
- If [Transfer method] is set to [Move], still images are deleted from the internal memory of the camera after they are transferred to the smartphone.
  - [Checking and Changing the Camera Settings](#)
- When [Display after shooting] is turned on in [Shooting settings] and the shutter button of the basic app is used to capture still images, the images are automatically transferred to the smartphone. The images captured using the shutter button of the camera while [Display after shooting] is set to off and videos are not transferred automatically.
  - [Transferring Captured Still Images and Videos to a Smartphone](#)
- The OLED panel and all lamps turn off during exposure.

 > Shooting Videos Using  
Only the Camera with the  
Self-timer Function

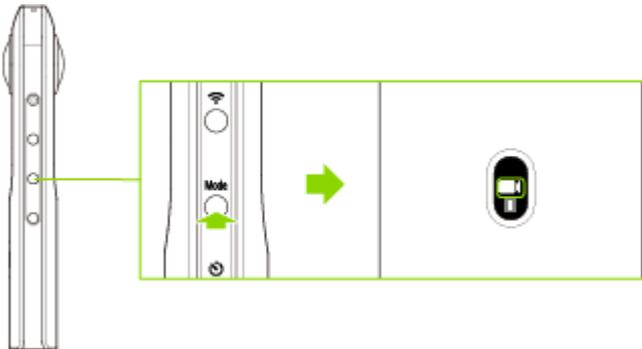

## Shooting Videos Using Only the Camera with the Self-timer Function

This section explains the shooting method using the self-timer function.

1. Turn on the power of the camera.

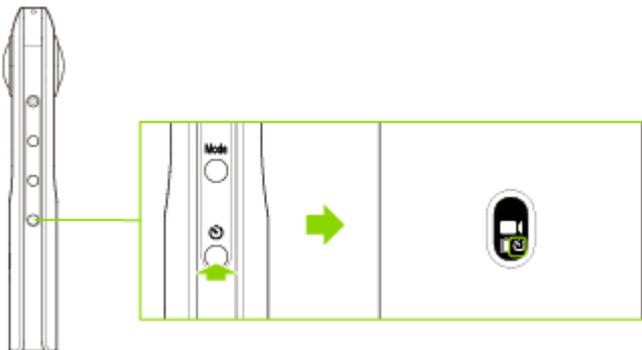

2. Press the mode button to select the video shooting mode.

-  appears on the OLED panel.

3. Press the self-timer button to turn the self-timer shooting function on.

-  appears on the OLED panel.

4. Place the camera.

5. Press the shutter button to start the self-timer.

- Countdown starts and shooting is started 5 seconds later.

- During countdown, the countdown sound is heard. Also, the remaining time is displayed on the OLED panel. (When the remaining time is less than 2 seconds, the countdown sound interval becomes shorter.)
- **REC** appears on the OLED panel during video recording.
- Press the shutter button again to stop shooting.
- The recorded video is saved in the internal memory of the camera.

### Caution

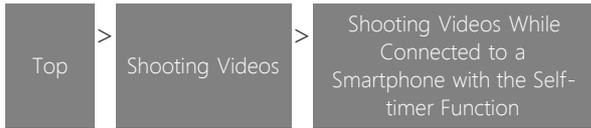

- If you press and hold the power button and wireless button to reset the camera while recording a video, the internal memory may become damaged and may no longer be able to save data.
- Videos may not be transferred to a smartphone depending on the video settings.
- Videos may not be played back on a smartphone or computer depending on the video settings.
- The camera may get hot if you record a video for a long period of time or perform shooting multiple times in quick succession. In this case, the camera may stop operating to prevent damage from high temperatures.

### Note

- Videos saved in the internal memory of the camera can be viewed on a smartphone or computer.
  - [Viewing Captured Still Images and Videos](#)

## Shooting Videos While Connected to a Smartphone with the Self-timer Function

You can record videos using the self-timer function with the basic app for smartphone.

1. Turn on the power of the camera.

2. Press the mode button to select the video shooting mode.

- appears on the OLED panel.

3. Place the camera.

4. Connect the camera to a smartphone via a wireless LAN or Bluetooth®.

- Connecting to a Smartphone via Wireless LAN
- Connecting to a Smartphone via Bluetooth®

5. Start the basic app for smartphone.

- The shooting screen is displayed.

6. Tap in the upper right-hand corner of the screen.

- The [Shooting settings] screen is displayed.

7. Tap [Self-timer], and then tap the countdown time to set.

8. Tap to start the self-timer shooting.

- The shooting is stopped when  is tapped. (The shooting can also be stopped by pressing the shutter button of the camera.)

**Note**

- If a video is recorded while the camera is connected to a smartphone with the GPS function enabled, position information is recorded for the video.
- When [Display after shooting] is turned on in [Shooting settings] and the shutter button of the basic app is used to capture still images, the images are automatically transferred to the smartphone. The images captured using the shutter button of the camera while [Display after shooting] is set to off and videos are not transferred automatically.
  - [Transferring Captured Still Images and Videos to a Smartphone](#)
- The default countdown time is 5 seconds.
- If the shutter button of the camera is pressed during countdown, shooting can be performed immediately. (The self-timer is canceled.)
- To cancel the self-timer, press the self-timer button or mode button. (If the remaining countdown time is less than 2 seconds, the self-timer cannot be canceled.)
- The countdown sound volume is proportional to the shutter sound volume. (When the shutter sound is off, the countdown sound is off either.)
- The settings below can be made for the basic app for smartphone.
  - Countdown time (2 seconds, 5 seconds, 10 seconds)
  - Exposure mode for videos (ISO sensitivity priority, etc.)

Shooting in the Preset Shooting Modes

Shooting Still Images in the Preset Shooting Modes

## Shooting Still Images in the Preset Shooting Modes

You can capture still images with settings suitable for expressing the atmosphere of each scene by simply selecting a preset shooting mode.

### Face:

This mode is suitable for portrait shooting.

A person's face is detected and its position is adjusted to the center of the image to obtain a clear image of the person.

#### Caution

- The detection distance for faces is up to approx. 80 cm.
- A face cannot be detected at the seam between the images captured with the front and rear lenses.

### Night View:

The dynamic range of bright areas is expanded to reduce noise. In addition, a person's face is detected to obtain a clear image of the person.

#### Caution

- It is recommended to use a tripod to prevent the shake of the camera.

### Lens-by-Lens Exposure:

Image processing such as exposure adjustment and white balance adjustment is performed individually for each image captured with the front and rear lenses. This mode is suitable for capturing scenes with significantly different brightness conditions between the camera front side and the camera rear side.

Images captured with the front and rear lenses are displayed side by side.

#### Caution

- The seam between the images captured with the front and rear lenses is located in the center of the entire image.
- The seam between the images captured with the front and rear lenses may be noticeable.

## Viewing Captured Still Images and Videos

The basic app for smartphone can be used to view images saved in the camera or transferred to a smartphone.

1. Turn on the power of the camera.

2. Connect the camera to a smartphone via a wireless LAN.

- [Connecting to a Smartphone via Wireless LAN](#)

3. Start the basic app for smartphone.

- The shooting screen is displayed.

4. Tap [×] in the upper left-hand corner of the screen.

- Transferred images are displayed in [Device images].

5. Select where images are saved.

- [Device images]

- A list of images transferred from the camera to the smartphone is displayed.

- Images can be displayed in either timeline or thumbnail format.

- Images can be viewed even when the smartphone is not connected to the camera.

- [Cam images]

- A list of images saved in the internal memory of the camera is displayed.

- The display can be toggled between [Not transferred], [Transferred], and [All].

6. Tap the image to be viewed.

- The selected image is displayed in the Viewer.

### Caution

- It takes a long time to transfer long videos, and the battery may run down during the transfer.
- When the video size is "3840 × 1920", the video may not be played back depending on the connected smartphone.

### Note

- When an image is selected in [Cam images] and displayed in the Viewer, the selected image is transferred from the

internal memory of the camera and saved to the smartphone.

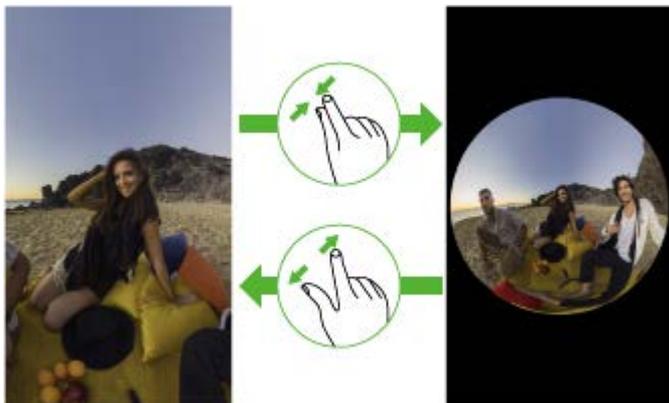

- Images in the camera cannot be displayed while shooting video.

## Viewer

You can display a desired area of a spherical image taken with the camera, and zoom in or out to check details in the image.

The screens of "RICOH THETA for iPhone" are used as examples in the following descriptions.

**Zooming in or out:** Pinch out, pinch in

**Changing the displayed area:** Swipe or flick

Tap the screen when an image is displayed in the Viewer to display the buttons and perform various operations.

### When [Cam images] is selected

←: Returns to the image list.

📌: Posts the image to a social networking service.

### When [Device images] is selected

←: Returns to the image list.

📌: Posts the image to a social networking service.

<: Displays the previous image.

>: Displays the next image.

 : Deletes the image.

 : Changes the display format.

 : Edits the image using the basic app, such as adding a blurred effect to a still image or extracting a part of a video.

### During video playback

 : Returns to the screen before playback.

 : Returns the display area to the default state.

 : Repeats playback from the beginning.

 : Plays back/Pauses the video.

 : Changes the display format.

Viewing and Sharing Using  
a SmartphoneBlurring Still Images (iOS  
App Only)

## Blurring Still Images (iOS App Only)

You can blur part of a still image transferred from the camera to the basic app for smartphone.

\* Blurring is only available on the iOS app.

1. Start the basic app for smartphone.
  - The shooting screen is displayed.
2. Tap [×] in the upper left-hand corner of the screen.
  - A timeline of transferred images is displayed in [Device images].
3. Select [Device images].
4. Tap the still image you want to edit.
  - The selected still image is displayed in the Viewer.
5. Tap the image to display the navigation bar.
6. Tap , and then tap [Blur].
  - The editing screen is displayed.
7. Trace the area to be blurred with your fingers.
  - The traced area is blurred.
  - The displayed area can be moved by flicking or swiping the zoom out display section of the spherical image.

### To make the blurred area smaller (remove some of the blurring)

Tap [Cancel]. When the blurred area turns green, trace the area to remove the blurring from with your fingers.

8. Tap [Save new].
  - The edited still image is saved as a new file.

#### Note

- The original still image is not deleted when the edited still image is saved.
- You can edit a still image using the editing app "THETA+" by selecting [Edit in THETA+] after tapping . For details on the "THETA+", see the following URL.  
<https://theta360.com/en/about/application/edit.html#RICOH-THETA-PLUS>

Viewing and Sharing Using  
a SmartphoneSharing Still Images and  
Videos

## Sharing Still Images and Videos

Captured images can be directly uploaded to a social networking service from the basic app.

1. Turn on the power of the camera.

2. Connect the camera to a smartphone via a wireless LAN.

- [Connecting to a Smartphone via Wireless LAN](#)

3. Start the basic app for smartphone.

- The shooting screen is displayed.

4. Tap [×] in the upper left-hand corner of the screen.

- A timeline of transferred images is displayed in [Device images].

5. Select where images are saved.

- [Device images]: Images transferred from the camera to the smartphone can be shared.
- [Cam images]: Images saved in the internal memory of the camera can be shared.

6. Tap the image to be shared.

- The selected image is displayed in the Viewer.

7. Tap the image to display the buttons, and then tap .\*

- The sharing screen is displayed.

\* Select [Share with this orientation] to change the area initially displayed as a thumbnail when an image is uploaded to "theta360.com" and the area that is first displayed when an image is viewed.

8. Enter a comment.

9. Select the social networking service to post the image to.

10. Tap [Done].

**Caution**

- A 3G or LTE line is used for sharing in Step 9 even if the camera is connected to a smartphone via a wireless LAN. Therefore, this operation needs to be performed in a place where this communication is possible. If sharing images via a wireless LAN, change the wireless LAN connection to an access point.
- When using "RICOH THETA for Android" to connect the smartphone to the camera via a wireless LAN, you may need to switch network connections to post images. Therefore, when you want to use the camera by connecting it to the smartphone after posting images, reconnect them.
- When an image is posted to a social networking service, it is compressed by the social networking service and may become grainy. Check the specifications of the social networking service for details.

**Note**

- Images are uploaded to the dedicated site "theta360.com", and a link to the uploaded images is posted to the social networking service.
- For still images, Photo Sphere XMP meta data is saved when the image is captured. Still images that have Photo Sphere XMP meta data added can be shared and viewed as spherical images on various Google services (Gallery, Google Maps, View, Photos, etc.).

Viewing and Sharing Using a Computer

Viewing Still Images on a Computer

## Viewing Still Images on a Computer

Using the basic app for computer allows you to scroll, zoom in, and zoom out while viewing spherical images on the computer.

1. Start the basic app for computer.
2. Select [File] → [Open] in the menu.
3. Select a still image to view.
  - The selected still image is displayed.
  - You can also open files by dragging and dropping them to the window of the basic app for computer.
  - The following operations are available on the display screen:

: Zooms in on the image.

: Zooms out on the image.

: Returns the display area to the default state.

: Makes the image rotate automatically.

: Switches to full screen display.

### Operations with mouse:

Drag to scroll within the still image.

Use the mouse wheel to zoom in or out on the image.

### Operations with keyboard:

Press the "Page Up" key to zoom in on the image.

Press the "Page Down" key to zoom out on the image.

Press the ←, ↑, ↓, and → keys to scroll the image.

- A full screen display can be launched by selecting [Display] → [Full Screen]. Press the "Esc" key to close the full screen display.

## Closing the Still Image

Select [File] → [Close] in the menu.

← Back

▲ Back to Top

## Viewing Videos on a Computer

Using the basic app for computer allows you to convert videos taken on the camera and then scroll, zoom in, and zoom out while viewing spherical videos on the computer.

1. Start the basic app for computer.
2. Select [File] → [Open] in the menu.
3. Select a video to view.
  - The selected video starts playing.
  - You can also open files by dragging and dropping them to the window of the basic app for computer.

### When the file before conversion is selected (the file name is "R\*\*\*.MP4")

A video conversion dialog box is displayed. Select or enter the desired output directory (folder to which to save the converted video) and click [Start].

- Multiple files can be converted at the same time by dragging and dropping files that have not been converted.
- Conversion may take some time depending on conditions such as the length of the video.
- The data file name after conversion is "R\*\*\*\_er.MP4". This file name can be changed. Videos do not need to be converted again the next time they are viewed.
- The following operations are available on the playback/display screen:

: Zooms in on the video.

: Zooms out on the video.

: Returns the display area to the default state.

: Makes the video rotate automatically.

: Switches to full screen display.

### Operations with mouse:

Drag to scroll within the video.

Use the mouse wheel to zoom in or out on the video.

### Operations with keyboard:

Press the "Page Up" key to zoom in on the video.

Press the "Page Down" key to zoom out on the video.

Press the ←, ↑, ↓, and → keys to scroll the video.

- A full screen display can be launched by selecting [Display] → [Full Screen]. Press the "Esc" key to close the full screen display.

### Caution

- When the video size is "3840 × 1920", the video may not be played back or may be resized to "1920 × 960" depending on the connected computer.

## Closing the Video

Select [File] → [Close] in the menu.

Changing the Settings

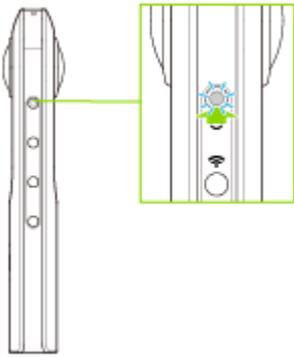

Checking and Changing the Shooting Conditions

## Checking and Changing the Shooting Conditions

Various settings such as the exposure mode and white balance can be set to suit the shooting conditions.

1. Turn on the power of the camera.

- To change the shooting conditions for videos, press the mode button to switch to the video shooting mode.

2. Connect the camera to a smartphone via a wireless LAN or Bluetooth®.

- Connecting to a Smartphone via Wireless LAN
- Connecting to a Smartphone via Bluetooth®

3. Start the basic app for smartphone.

4. Tap the shooting mode button in the lower right-hand corner of the screen to change the exposure mode.

### Auto:

The shutter speed, ISO sensitivity, and white balance are adjusted automatically according to the shooting environment. The noise reduction, DR compensation, or HDR rendering can also be selected in [Option Setting]. When [Shooting method] is set to [Interval shooting] in [Shooting settings], [Option Setting] cannot be set.

### Tv (Shutter speed priority):

The shutter speed and white balance can be set.

### ISO (ISO sensitivity priority):

The ISO sensitivity and white balance can be set.

### M (Manual):

The shutter speed, ISO sensitivity, and white balance can be set.

5. Make settings for each item.

- Move your finger over each setting value to select desired settings.
- The section displayed in white is the current setting.
- The setting ranges and options that can be selected for each item are as shown below.

### Shutter speed:

1/8 to 1/25000 (auto mode and shutter speed priority mode), 60 to 1/25000 (manual mode)  
When the exposure mode is set to the auto mode, the shutter speed cannot be set.

### ISO sensitivity:

Still image: Auto (ISO 64 to 1600, upper limit settable); ISO sensitivity priority/Manual (ISO 64 to 3200)

Video: Auto (ISO 64 to 6400, upper limit settable)

### White balance:

Auto: Adjusted automatically.

Outdoor: Adjusted for shooting outdoors (when sunny).

Shade: Adjusted for shooting in the shade.

Cloudy: Adjusted for shooting when cloudy.

Incandescent light 1: Adjusted for shooting in incandescent light.

Incandescent light 2: Adjusted for shooting in incandescent light.

(More red remains than when using [Incandescent light 1].)

Daylight color fluorescent light: Adjusted for shooting in daylight color fluorescent light.

Natural white fluorescent light: Adjusted for shooting in natural white fluorescent light.

White fluorescent light: Adjusted for shooting in white fluorescent light.

Light bulb color fluorescent light: Adjusted for shooting in light bulb color fluorescent light.

Underwater: Adjusted for shooting under water.

CT Settings: Adjusted with a specified color temperature value in the range 2500 to 10000 K.

Tap  in the upper right-hand corner of the screen during shooting to turn on [CT Settings].

- Tapping EV displays the slider for correcting the exposure. Moving the slider to the right brightens the image. Moving the slider to the left darkens the image.

### Caution

- If the shutter speed is set slower than 1/8 seconds when the exposure mode is set to the manual mode, a sound is heard both at the start and end of shooting. In addition, if shooting is performed when the exposure mode is set to the auto mode and [Option Setting] is set to the noise reduction or HDR rendering, a sound is heard both at the start and end of shooting. At this time, images are not saved if the power is turned off before shooting is complete.
- When performing shooting after setting the exposure mode to the auto mode and setting [Option Setting] to the noise reduction or HDR rendering, fix the camera in place using a tripod, etc. to prevent the camera from moving.

### Note

- Shooting condition settings are retained until the power is turned off or the settings are reconfigured.

## Changing the Still Image Shooting Mode Settings

Tap  in the upper right-hand corner of the screen in the still image shooting mode to display the [Shooting settings] screen and change various settings for the still image shooting.

### Shooting method:

The shooting method can be selected from [Normal shooting], [Interval shooting], and [Multi bracket].

When [Interval shooting] is selected, set [Interval] and [Shots].

### Display after shooting:

You can set whether or not to display the image after shooting.

### Self-timer:

The countdown time can be selected from 10 seconds, 5 seconds, and 2 seconds.

### CT Settings:

The color temperature setting can be turned on and off.

**ISO sensitivity upper limit:**

The upper limit of the ISO sensitivity can be set.

**Camera shutter volume:**

The volume of the shutter sound can be selected from [High], [Medium], [Low], and [OFF].

## Changing the Video Shooting Mode Settings

Tap  in the upper right-hand corner of the screen in the video shooting mode to check and change various settings for the video shooting.

**Max recordable time (1 time):**

The maximum recordable time per shooting can be set.

**Microphone gain:**

The gain of the microphone can be set.

[Normal] Used when the ambient sound volume is normal.

[Low] Used when the ambient sound volume is high.

**Self-timer:**

The countdown time can be selected from 10 seconds, 5 seconds, and 2 seconds.

**CT Settings:**

The color temperature setting can be turned on and off.

**Video size:**

The video size can be selected.

**ISO sensitivity upper limit:**

The upper limit of the ISO sensitivity can be set.

**Camera shutter volume:**

The volume of the shutter sound can be set.

## Changing the Preset Shooting Mode Settings

Tap  in the upper right-hand corner of the screen in the preset shooting mode to check and change various settings for the preset shooting.

Changing the Settings

Checking and Changing the  
Camera Settings

## Checking and Changing the Camera Settings

The status of the camera can be checked and various settings can be made with the basic app for smartphone.

1. Tap [Settings] on the main screen of the basic app for smartphone.
  - The [Settings] screen is displayed.

### Setting Items

The following setting items are displayed on the [Settings] screen.

#### Connection:

The connection status between the camera and the smartphone can be checked.

#### Change Wi-Fi Password:

The wireless LAN connection status can be checked and the password can be changed. Follow the procedure below to change the password.

1. Enter a new password (8 or more characters) and tap [Change Password] at the bottom of the screen.
  - Single-byte alphanumeric characters and symbols can be used. (Spaces cannot be used.)
2. When the password has been changed successfully, press the wireless button of the camera to turn the wireless LAN function off and back on.
  - The password is not changed until the wireless LAN function is turned off.
3. Tap [Cam images] or the shutter button to connect the camera to the smartphone again.
  - If you cannot connect the camera to the smartphone, delete the old camera information used before the password change and enter the new password in the Wi-Fi™ settings of the smartphone.

#### Caution

- The password can be changed only when the camera is connected to the smartphone.

#### Note

- Note that the previous password can no longer be used.
- If you have forgotten the password, press and hold the wireless button and mode button simultaneously to restore the default password. The power turns off automatically when the password is reset successfully.

#### Cam Bluetooth settings:

The on/off status of the camera Bluetooth function and GPS continuous transfer function can be checked, and the status can be switched on/off.

#### Camera settings:

The following camera settings can be checked and changed.

##### Sleep Mode:

The length of time before the camera enters the sleep mode can be set. (3 minutes, 5 minutes, 7 minutes, 10 minutes, OFF)

The power turns off automatically approx. 5 minutes after the camera enters the sleep mode.

**Camera shutter volume\*:**

The volume of the shutter sound can be set. (High, Medium, Low, OFF)

**Transfer method\*:**

You can select whether to keep the images on the camera when transferring images from the camera to the smartphone. Select [Copy] to retain the images in the internal memory after transfer or select [Move] to delete the images from the internal memory after transfer.

**Camera version\*:**

The firmware version of the camera can be checked.

**Camera license\*:**

The licenses used for the camera can be checked.

**Share Settings:**

The account for each social networking service can be set.

\* Settings can only be checked and changed when the camera is connected to the smartphone.

Changing the Settings

Setting the Camera to the  
Light/Sound Off Mode

## Setting the Camera to the Light/Sound Off Mode

You can keep the OLED panel and all lamps off and mute sounds including the shutter sound during shooting.

1. Press and hold the mode button and self-timer button simultaneously.

- The camera enters the light/sound off mode
- To cancel the light/sound off mode, press a button other than the shutter button.

Changing the Settings

Turning the Power Off  
Forcibly

## Turning the Power Off Forcibly

You can forcibly turn off the camera when it is operating incorrectly or becomes inoperable.

1. Press and hold the power button.

- The power is forcibly turned off.

## Specifications

**Image sensor:**

1/2.3" back-illuminated CMOS image sensor × 2

**File size (still images):**

5376 × 2688

**File size and frame rate (videos):**

3840 × 1920 / 29.97 fps

1920 × 960 / 29.97 fps

**Lens:**

Aperture: F2.0

Lens construction: 7 elements in 6 groups × 2

**Shooting mode:**

Auto, Shutter speed priority, ISO sensitivity priority, Manual (\*1)

**Shooting distance:**

Approx. 10 cm to ∞ (from front of lens)

**Exposure control mode:**

Still image: Auto, Shutter speed priority AE, ISO sensitivity priority AE, Manual exposure (\*1)

Video: Auto

**Exposure compensation:**

Manual compensation (-2.0 to +2.0 EV, 1/3 EV steps) (\*1)

**ISO sensitivity (standard output sensitivity):**

Still image: [Auto] ISO 64 to 1600, upper limit settable; [ISO sensitivity priority]/[Manual] ISO 64 to 3200 (\*1)

Video: [Auto] ISO 64 to 6400, upper limit settable

**White balance mode:**

Auto, Outdoor, Shade, Cloudy, Incandescent light 1, Incandescent light 2, Daylight color fluorescent light, Natural white fluorescent light, White fluorescent light, Light bulb color fluorescent light, Underwater, Color temperature settings (2500 to 10000 K) (\*1)

**Shutter speed:**

Still image: [Auto] 1/25000 to 1/8 seconds; [Shutter speed priority] 1/25000 to 1/8 seconds (\*2); [Manual] 1/25000 to 60 seconds (\*2)

Video: [Auto] 1/25000 to 1/30 seconds (\*2)

**Recording medium:**

Internal memory: Approx. 14 GB

**Number of images that can be recorded and recording time (\*2):**

Still image: Approx. 3000 images

Video (time per recording): Max. 3 minutes (\*3)

Video (total recording time): Approx. 32 minutes (4K), approx. 115 minutes (2K)

**Power source:**

Lithium ion battery (built-in battery) (\*4)

**Battery life:**

Still image: Approx. 260 images (\*5)

Video: Approx. 60 minutes (\*5)

**Image file format:**

Still image: JPEG (Exif Ver. 2.3), DCF2.0 compliant

Video: MP4 ([Video] MPEG4 AVC/H.264; [Audio] AAC-LC (mono))

**Shooting function:**

Still image: Noise reduction, DR compensation, HDR rendering, Interval shooting (\*6), Multi-bracketing shooting, Self-timer (2 seconds, 5 seconds, 10 seconds), My Settings

Video: Self-timer (2 seconds, 5 seconds, 10 seconds), My Settings

Preset: Face, Night View, Lens-by-Lens Exposure

**External interface:**

Micro USB: USB 2.0

**Bluetooth® accessory:**

Compatible with Bluetooth® HID devices

**Dimensions:**

45.2 mm (W) × 130.6 mm (H) × 22.9 mm (17.9 mm (\*7)) (D)

**Weight:**

Approx. 104 g

**Operating temperature range:**

0 to 40°C (0 to 104°F)

**Operating humidity range:**

90% or less

**Storage temperature range:**

-20 to 60°C (-4 to 140°F)

(\*1)  
A smartphone is required to change modes or configure manual settings.

(\*2)  
The number of images and time are guides only. The actual number differs according to the shooting conditions.

(\*3)  
The camera may get hot if you record a video for a long period of time or perform shooting multiple times in quick succession. In this case, the camera may stop operating to prevent damage from high temperatures.

(\*4)  
Charge the battery by connecting the camera to a computer using the provided USB cable.

(\*5)  
The number of images that can be taken and recording time are guides based on RICOH's measurement method. The actual number differs according to the usage conditions.

(\*6)  
The minimum interval for the interval shooting differs according to the shooting settings.

(\*7)  
Excluding lens section.

[Top](#)[Additional Information](#)[Cautions on Use](#)

## Cautions on Use

### Camera

- This product was manufactured for use in the country in which it was purchased. The warranty is only valid in the country in which the camera was purchased.
- Should the product fail or malfunction while you are abroad, the manufacturer assumes no responsibility for servicing the product locally or bearing the expenditure incurred therefore.
- Be sure not to drop or apply any sudden force to the camera.
- While you are carrying the camera, be careful not to hit it against other objects. Take special care not to hit the lens.
- In an environment where the temperature changes suddenly, condensation may occur in the camera, resulting in troubles such as fogging of the glass surface or malfunctions of the camera. If this occurs, place the camera in a bag to slow the temperature change as much as possible. Take it out of the bag after the temperature difference from the atmosphere has decreased to a fairly small amount. If condensation occurs, wait until the moisture has dried before using the camera.
- Do not get the camera wet. Do not operate the camera with wet hands. This can result in malfunction or an electrical shock.
- When taking photos of an important event (such as a wedding or overseas trip), take a test photo beforehand to check that the camera is working properly.
- The camera may get hot if you record a video for a long period of time or perform shooting multiple times in quick succession. In this case, the camera may stop operating to prevent damage from high temperatures.
- The temperature of the camera may rise high when a video is recorded for a long period of time or shooting is performed multiple times in quick succession. Use a tripod etc. when performing shooting for a long period of time to prevent low temperature burns.

### Battery

- A lithium ion battery is used in the camera.
- Be sure to charge the battery before use, as it is not fully charged before shipment.
- Due to the characteristics of the battery, use in cold areas will shorten the usage time even if the battery is sufficiently charged.
- If storing for a long time, charge the battery for around 30 minutes once a year.
- Store the battery in a cool place. A dry place with an ambient temperature of 15 to 25°C (59 to 77°F) is recommended. Avoid extremely hot or cold places.
- Do not recharge immediately after charging is done.
- Charge the battery in an area with an ambient temperature of 10 to 40°C (50 to 104°F). Charging in a hot area may cause the battery to deteriorate. Charging in a cold area may prevent sufficient charging.

[Top](#)[Additional Information](#)[Care and Storage](#)

## Care and Storage

### Care

- Note that if fingerprints, dirt, etc. get onto the lens, image quality may deteriorate.
- When dust or dirt does get on the lens, do not touch it directly with your fingers, and either use a blower (available in stores) to blow it off, or a soft cloth to gently dust it off.
- Wipe the lens particularly carefully after use at the beach or around chemicals.
- If the camera fails to work properly, consult the nearest service center.
- Never disassemble the camera by yourself, as this is dangerous.
- Do not get volatile substances, such as thinner, benzene, or pesticides on the camera. This may cause a change in quality, paint to peel, etc.
- If the camera exterior becomes dirty, wipe it clean using a dry soft cloth such as a glasses wiping cloth, or wipe it using a thoroughly wrung-out wet cloth. Do not use solvents, as doing so may cause the external surface of the camera to corrode.

### Use and Storage

- Avoid using or storing the camera in the following kinds of places, as this may damage the camera.
  - Places with high temperature, high humidity, or rapid changes in humidity or temperature
  - Places with large amounts of sand or dust
  - Places with significant vibration
  - Places where it will be in contact with chemicals such as insect repellent or products made from rubber, vinyl, etc. for long periods of time
  - Places where strong magnetism is emitted (next to monitors, transformers, magnets, etc.)
- Store the camera in a dust-free camera bag, etc. to prevent dust or dirt from getting on the camera. Also, avoid carrying the camera without a case (in your pocket, etc.) to help to keep free from dust or fiber particles.

### Precautions Regarding Care of the Camera

- Be sure to turn the power off.

[Safety Precautions](#)

## Safety Precautions

### Warning Symbols

Various symbols are used throughout this user guide and on the product to prevent physical harm to you or other people and damage to property. The symbols and their meanings are explained below.

#### Danger

- This symbol indicates matters that may lead to imminent risk of death or serious injury if ignored or incorrectly handled.

#### Warning

- This symbol indicates matters that may lead to death or serious injury if ignored or incorrectly handled.

#### Caution

- This symbol indicates matters that may lead to injury or physical damage if ignored or incorrectly handled.

### Sample Warnings

- The  symbol alerts you to actions that must be performed.

- The  symbol alerts you to prohibited actions. The  symbol may be combined with other symbols to indicate that a specific action is prohibited.
- Examples
  -  Do not touch
  -  Do not disassemble

Observe the following precautions to ensure safe use of the camera.

#### Danger

- Do not attempt to disassemble, repair or alter the camera yourself. The high-voltage circuitry in the camera poses significant electrical hazard.

- Stop use immediately if you notice something unusual such as an abnormal smell, smoke, or overheating. Ask your nearest dealer or service center for repair.

## Warning

- Turn off the power immediately if any metallic object, water, liquid, or other foreign object gets into the camera. And contact the nearest service center. Do not continue using the camera if it has a failure or malfunction.

- Keep the camera out of the reach of children. Young children cannot understand the information in "Safety Precautions" and "Cautions on Use", which may cause an accident.

- Do not touch the internal components of the camera if they become exposed as a result of being dropped or damaged. The high-voltage circuitry in the camera poses significant electrical hazard. Contact your nearest dealer or service center if it is damaged.

- Do not use the camera near flammable gases, gasoline, benzene, thinner, or similar substances to avoid the risk of explosion, fire, or burns.
- Do not use the camera in locations such as airplanes where usage is restricted or prohibited as this may lead to disasters or accidents.

- Stop charging if the charging does not complete within the specified charging time.
- Never put the battery in a microwave oven or high-pressure container.

## Caution

- Contact with fluid leaking from the battery in the camera can lead to burns. If you touch the fluid, rinse the area with water immediately. (Do not use soap.) And contact the nearest service center. Do not continue using the camera if it has a failure or malfunction.

- Do not get the camera wet. In addition, do not operate it with wet hands. Both pose the risk of electric shock.
- Do not use the camera wrapped in a cloth, etc. Doing so may cause a fire.
- Do not allow the metal of the terminals to short circuit. Doing so may cause a fire.
- Do not use the camera in wet places like kitchens where it will be exposed to oily smoke and humidity. Doing so may cause a fire or electric shock.
